The UDS-PRO Doc[™] Advantage

System framework

- Cloud or facility-hosted server options for working in Citrix and VMware environments
- Instant, automatic interfacing between the UDS-PRO Doc[™] System and the UDS-PROi[®] software, producing a seamless flow of IRF-PAI data upon setup
- A wide choice of installation options, including:
 - Simple, noninterfaced, out-of-the-box setup
 - Comprehensive, seamless, HL7[®] interfacing with EMR and billing systems exchanges
 - Automated PDF clinical document exchange to medical records for concurrent information and storage
 - A billing module that incorporates the hospital's charge master into appropriate therapy documents for easy integration of therapy codes and units of service back to the billing system in real time
- Optional LDAP module with simplified security and sign-in procedures
- Optional physician portal that allows authorized users to view and sign documents from any Internet-enabled device, including iPads and iPhones

Software tools

- Collection of ready-to-use physician, nursing, and therapy templates
 - Customizable mandatory fields for meeting *Medicare Benefit Policy Manual* requirements
 - Built-in FIM[®] rating assistance and detailed drop-down selections for CMS's quality indicators
 - Copy-forward functionality with individual user access set by administrative users
- SmartFIM[™] logic that tracks all relevant FIM[®] documentation and recommends the optimal admission and discharge ratings
- Quality indicator logic that tracks the initial admission QI codes and sends them to the IRF-PAI
- Built-in therapy tracker that compiles minutes and modes, transfers information to the IRF-PAI, and provides weekly summaries of your patients' daily compliance with the three-hour rule
- Electronic "sticky note" that facilitates real-time team communication about the patient's care
- Quick, automated plan of care development based on clinical assessments

Oversight reports

- Individual end-user "to-do lists" with automatic reminders and warning flags for any missed or pending CMS requirements or facility-defined criteria
- Report views that trend patient data for numerous variables, including therapy minutes, FIM[®] ratings, vitals, education, and pain
- Real-time document status views that identify the status and completion of all documents
- A library of customizable administrative reports that provide global oversight for managing all your documentation processes
