On-Demand Reports

What are on-demand reports?

UDSMR provides interactive, online reports to all UDS-PRO® System subscribers. Housed within the UDS Central™ website, these unique reporting tools are available 24 hours a day, 7 days a week, providing you access to on-demand reports that you can use to analyze your facility's performance any time from anywhere.

Why use on-demand reports?

By using UDSMR's on-demand reports to analyze past and present performance, your facility can identify its program's strengths and areas for improvement. These reports can also help your facility determine whether changes to admission policies, staff training efforts, and other practices have resulted in improved performance. Additionally, your facility can use the reports to analyze data at the RIC, CMG, and patient levels to determine whether specific populations or individual patients are impacting your facility's performance.

What kinds of reports are available?

UDSMR offers seven main on-demand reports but limitless ways to view your data. **Outcome reports** benchmark your facility's against comparison groups, while **demographic reports** allow you to examine demographic influences on your outcomes. **Trending reports** provide monthly, quarterly, and yearly trending data and graphs for your choice of two outcome measures at once. The **Cases with Special Characteristics Report** provides benchmarks on the percentages of early transfers, short stays, expired cases, and interrupted stays. The **Percentage of Cases by Comorbidity Tier** report provides benchmarks related to the 10 comorbid conditions entered for cases. The **Rehab Metrics Report** is a comprehensive report that merges the most popular sections of the aforementioned reports into one easy-to-access, multi-page report. Finally, **coding and clinical reports** allow your facility to identify rating issues associated with function modifiers, FIM® items, and impairment/etiologic diagnosis combinations.

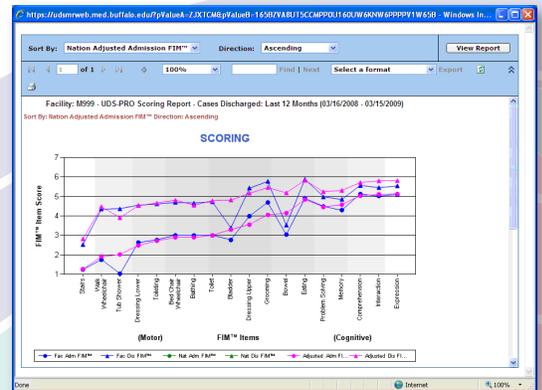

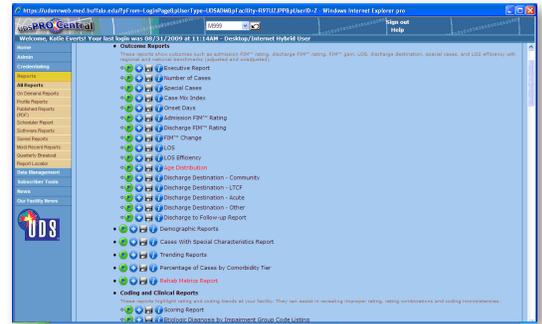

Each major report can be customized to your facility's needs. You can select variables such as total discharge FIM® rating, FIM® change, LOS, and case-mix index. You can also select specific time periods (including rolling 12-month fiscal years), impairments, and demographic information to further refine your report. You can even drill down through the report at the RIC, CMG, or patient level and compare your facility's data to the state, the region, the nation, or other facilities within your corporation.

Other features

In addition to the limitless reporting options, UDSMR's on-demand reports offer a variety of export formats, including PDF, CSV, and XLS. Our "saved reports" option allows users at your facility to save frequently run reports and their parameters to a single location for quick access during future sessions. Finally, our on-demand database is updated every week with new data, ensuring the highest quality and standards in benchmark reporting.

Additional information

For more information on UDSMR's on-demand reports, contact Maggie DiVita, Analytical Services Group Supervisor, at 716-817-7864 or *mdivita@udsmr.org*.
